

THE CAMPFIRE IS CRACKLING AND DINNER IS STEAMING ON THE STOVE. AFTER A LONG DAY, THE BEST PART OF THE TRIP IS ABOUT TO BEGIN.

If we don't eat enough during a hiking tour, then our performance levels rapidly sink toward zero // The energy bar contingent solves this problem by quickly delving into the lid of their rucksacks. For outdoor gourmets, however, a self-prepared evening meal is the highlight of a long day. Especially up on the fells, when despite the midnight sun, the temperatures significantly drop in the evening, there is nothing more heart-warming than a Swedish stew. There's a real sense of adventure involved in open-air cooking. Not all ingredients are always available. Although a herd of reindeer crossed our path today, we had to make do with dried reindeer meat. If you're not daring enough to experiment and yet still don't want to do without a tasty and quick evening meal, you can

stock up on dehydrated outdoor food from the sporting goods stores in northern Sweden. We were constantly surprised at the wholesome foods that can be conjured up by just adding water to the contents of the aluminium bags. After reading the small print we soon felt at home as the manufacturer is a company from Augsburg in Germany. Our tried-and-tested "Travel Lunch" is simply disguised in Swedish packaging. But for outdoor gourmets, nothing compares to cooking on an outdoor stove with their own bubbling pots and sizzling saucepans. Our tip: the cookbook "**Faszination Outdoor-Küche**" (Fascination Outdoor Cooking) published by the **ZIEL-Verlag** (see the next double page).

ON A TOUR, FOOD AND DRINKS ARE JUST AS IMPORTANT AS PROTECTION AND WARMTH. IF YOU'RE COUNTING CALORIES NOW, YOU'LL MISS OUT.

THE MATERIAL FOR OUTDOOR UTENSILS IS NOT A QUESTION OF TASTE: IF YOU WANT TO HEAT UP MORE THAN WATER, USE STAINLESS STEEL.

Cooking utensils made of stainless steel are the first choice material for outdoor gourmets // The specially hardened stainless steel cooking utensils from **TATONKA** are completely taste-neutral, very easy to clean, rust-free, robust and have perhaps the most important feature for outdoor kitchens: stainless steel is and remains antibacterial. If you've ever experienced an upset stomach on your travels, you know how important the subject of hygiene is during the summer. But be careful: not all stainless steel is the same. Low-quality material doesn't bring pleasure in the long term. All positive material properties only apply if the items have been manufactured to a high quality. Aluminium may be lighter, but does not boast the aforementioned properties. If every gram of weight matters and you only want to heat up water, you should go for titanium utensils instead. But more complex shapes are not

possible with this hard material. At the end of the day, stainless steel remains the best alternative.

One of our favourite products is the most attractive from the stainless steel series by **TATONKA**: the air-insulated stainless steel mug **Thermo Plus**. In the morning it acts as a coffee mug, during the tour it's perfect for quickly mixing an isotonic drink and in the evening we use it to enjoy a sip of red wine, without affecting the taste. Hot drinks stay hot in this mug, without burning your fingers. And cold beer stays colder for longer; a natural wonder in its most beautiful form.

For the hunters and gatherers amongst you, we also recommend taking the **Food Container** on tour. It proved itself on the hunt for berries, as well as serving as a leak-proof supply

container and a perfect cereal bowl for our berry muesli in the morning. Only Meike was impressed by the rare cloudberry, but everyone loved the resilient **Food Container**.

The book tip for outdoor gourmets!

8-parts

10-parts

Faltwindschutz 8-teilig/10-teilig Aluminium wind protection for your camp stove. Small, light and can be stored away without taking up much space. When needed, simply fold around the cooker and secure into the ground with the two sliders – simple as that! The practical Folding Wind Guard is available in 8 sections for smaller cooking areas or 10 for larger ones. A big advantage is that the cooking time is shortened due to the minimum heat loss. **Material:** Stainless Steel 18/8

Pot Gripper Grip handle for pots and pans. Just as securely as with tongs, the Pot Gripper can remove hot pots and pans from the stove without any problems. **Material:** Aluminium

Alcohol Burner +
Stand Alcohol Burner

Alcohol Burner Small, compact burner for your travels. Simply fill up the spirit, light and your food can be simply heated up and prepared. Burning duration approx. 40 minutes per filling. **Material:** Stainless Steel 18/8

Stand Alcohol Burner Safe stand for the Alcohol Burner, ideal for uneven surfaces. The stainless steel stand consists of four single parts, which can be quickly and simply assembled and dismantled.

Features: Stand for alcohol burner (not included) Easy to assemble Takes up minimum space **Material:** Stainless Steel 18/8

Flame Adjuster To control the flame height of the Alcohol Burner. With the Flame Adjuster the flame height can be variably regulated and of course also extinguished. It can be integrated into the Alcohol Burner for storage. **Material:** Stainless Steel 18/8
